Push Verify

Seamless verification, enhanced protection.

Deliver a safer, easier-to-use, and more cost-effective user authentication experience with Telesign Push Verify.

Did you try to sign in?

Yes, I did

No, I didn't

A better authentication experience is a tap away

Convenient and reliable
Eliminate the need for customers to download multiple verification applications. Verify users with minimal effort on their end.

Cost-effective
Stop sending costly and unpredictable SMS messages. Push Verify offers a lower-cost user authentication method to help you accurately forecast spend.

Safe from social engineering
Stay a step ahead of phishing attempts. Without one-time passcodes (OTPs) and knowledge-based questions, there's nothing for bad actors to steal.

Go global
Leverage global coverage to reach and verify every customer, no matter where they are in the world.

Native SMS fallback
Verify every user even if they can't receive a push notification. Push Verify will automatically fallback to SMS to provide you peace of mind that your notification gets delivered.

How it works

Sign in
Username
Continue

1 Notification

Successful

Did you just try to sign-in?

Allow
Deny

Welcome back

End user signs in on customer website.

End user recieves mobile notification indicating they have an in-app notification in customer app.

End user recieves in-app notification with details to confirm login.

End user clicks approve or deny login.

End user receives confirmation that login is approved.

Fail

SMS fallback
