

Silent Verification

Establish trust, behind the scenes.

Fast, frictionless, and secure – Silent Verification works by instantly matching the user's phone number with Mobile Network Operator data to verify the user is in possession of the device. The perfect balance of security and simplicity, Silent Verification delivers a safer, more seamless customer experience.

Higher conversion rates. Less fraud.

Faster verification

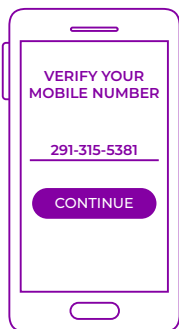

Reduce latency and eliminate delayed and undelivered OTPs with instant verification.

Frictionless experience

Verify users behind the scenes, remove user inputs from your verification workflow.

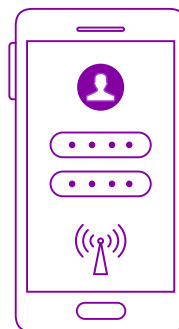

Enhanced protection

Eliminate OTPs and knowledge-based questions to ensure there's nothing for bad actors to steal.

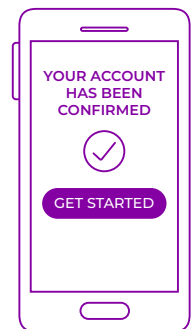

END USER ENTERS THEIR NUMBER AT SIGN-UP OR LOGIN

○ ○ ○ ○
TeleSign sends user consent and parameter data to network operator.

NETWORK OPERATOR PERFORMS REAL-TIME USER VERIFICATION

○ ○ ○ ○
Network operator confirms (YES or No) that the end-user MSISDN matches their subscriber data.

END USER IS GRANTED OR DENIED ACCESS
