Silent Verification

Establish trust, behind the scenes.

Fast, frictionless, and secure—Telesign Silent Verification works by instantly matching the user's phone number with Mobile Network Operator data to verify the user is in possession of the device. The perfect balance of security and simplicity, Silent Verification delivers a safer, more seamless customer experience on a global scale.

Drive customer conversions while preventing fraud.

Verify faster, with less friction

Reduce latency and remove user inputs from your verification workflow. Instantly verify users behind the scenes without using One-Time Passcodes (OTPs).

Prevent social engineering

Stay a step ahead of phishing attempts. Without OTPs and knowledge-based questions, there's nothing for bad actors to steal.

Expand global coverage

Simplify verification in 15 countries without compromising user experience.

SMS fallbacks

No coverage, no problem. If Silent Verification is unavailable, ensure delivery with automatic SMS Fallback.
